DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6 and 24-33, drawn to a simple card for monitoring chassis cooling fans, classified in class 236, subclass 91.
 - II. Claims 7-13, 20-23, 34-35, drawn to a computer controlled method of monitoring chassis cooling fans, classified in class 700, subclass 300.
 - III. Claims 14-18, drawn to a server processing card and the abilities therein, classified in class 710, subclass 106.
 - IV. Claim 19, drawn to a midplane printed circuit board, classified in class 361, subclass 720.
2. Inventions I, II, III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, inventions I and II have separate utilities because Invention I is designated as computer controlled, while invention I is a simple system not claiming to use a central computer for control. Invention III has separate utility such as a simple server processing card, while invention IV has a separate utility as a master circuit board. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
